 - columns
 - name
 - type
 - units
 - UCD

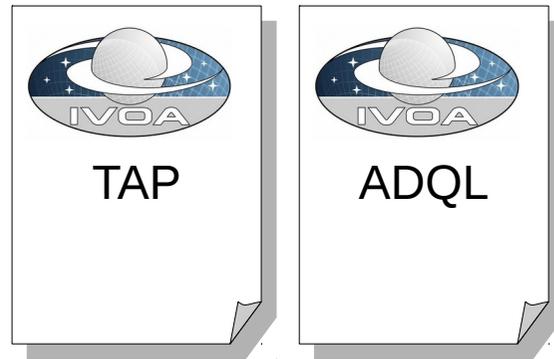

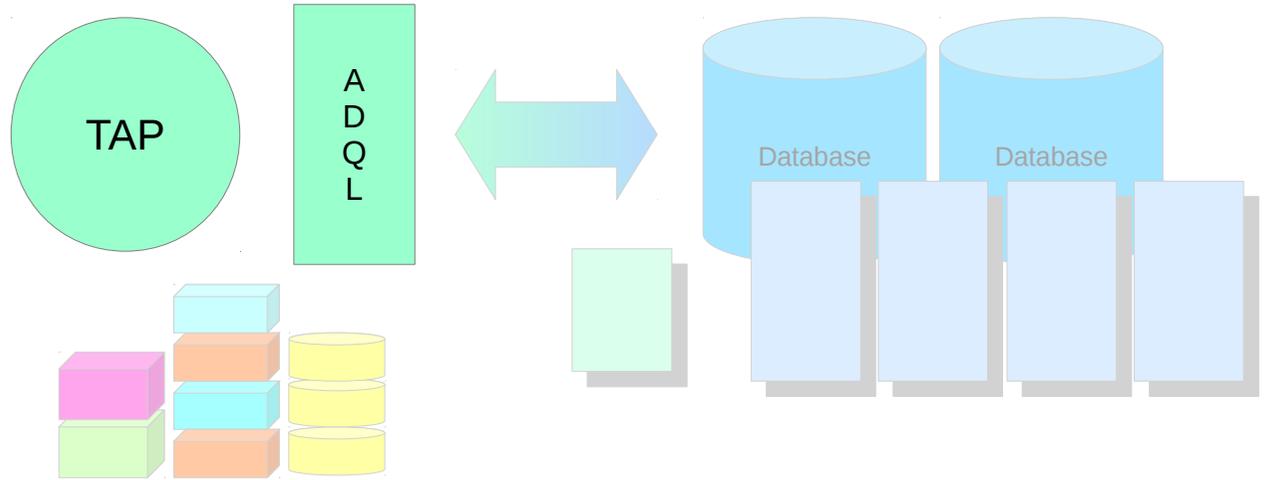

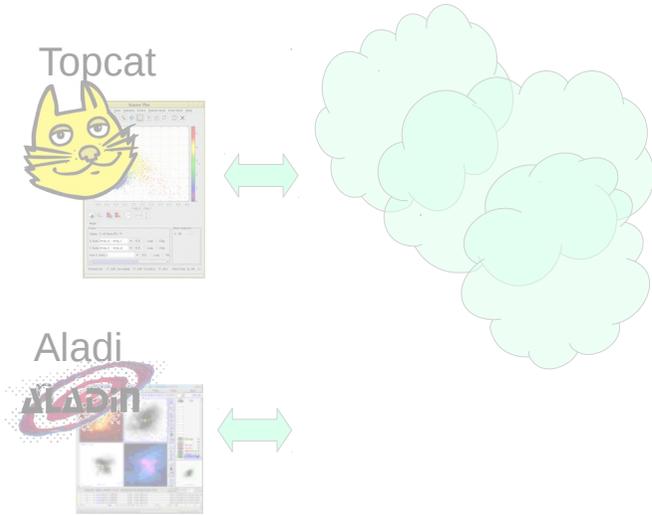

Software developer

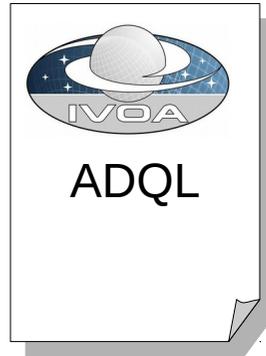

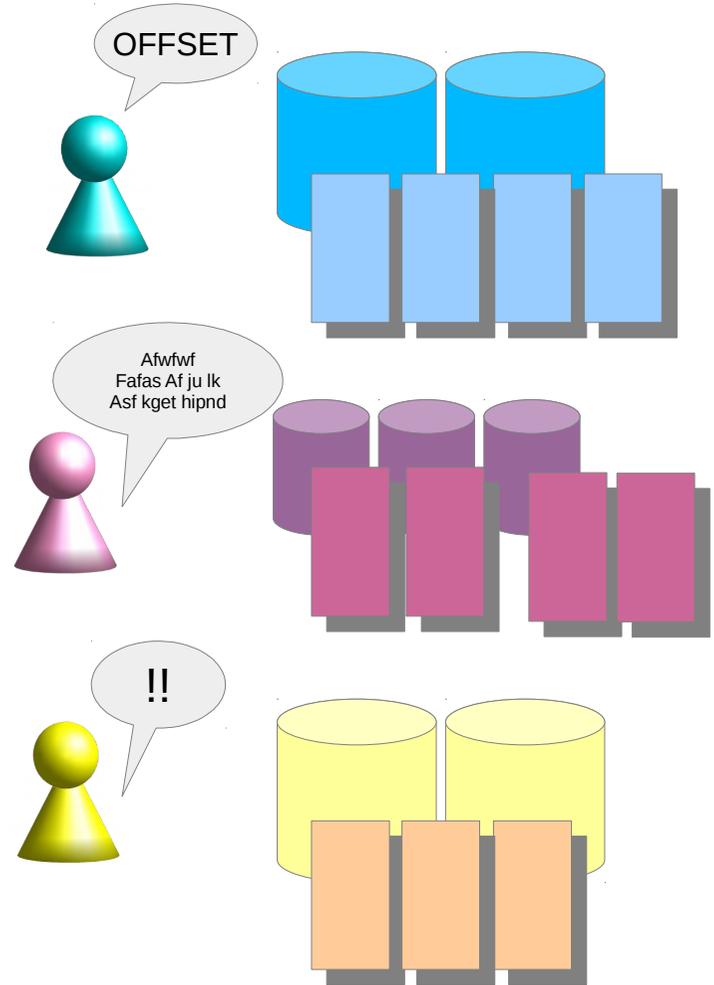

IVOA member

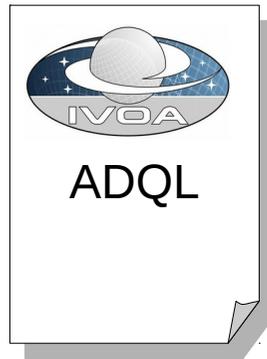

Initial proposal and group discussion

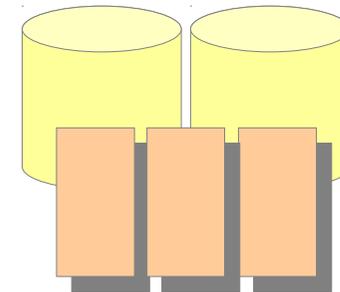

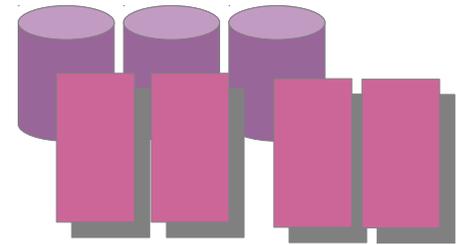

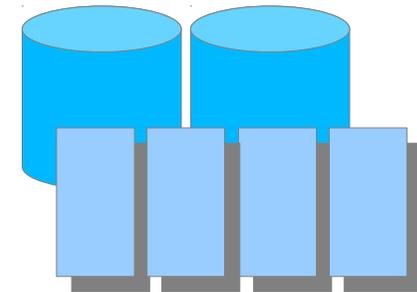

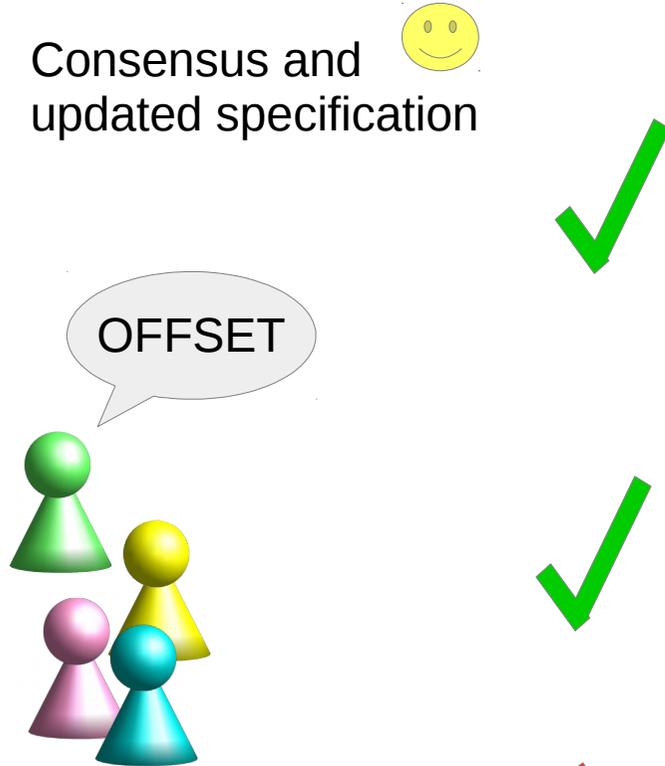

```
SELECT
...
FROM
...
WHERE
...
OFFSET n
```

Sometimes
the complicated ones are easy,
and sometimes
the simple ones are hard.

SELECT
 ...
 FROM
 ...
 WHERE
 ...
OFFSET *n*

Optional features
 VS
 range of platforms

What do we do if Oracle does not support OFFSET

Cosmopterix

Docker containers, providing basic install of each database platform.

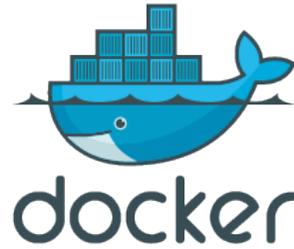

A simple platform for experimenting with ADQL syntax.

GitHub project
- contributions welcome

Working

- PostgreSQL
- MySQL
- MariaDB
- HSQLDB
- Apache Derby
- Oracle (*)

Future

- H2
- SQLite
- SQLServer
- Qserv
- SpiderEngine
- Hadoop

Lyonetia

A place to share example ADQL and SQL queries.

Initial goals

- Provide source material for ADQL parser tests
- Provide source material for ADQL query tests

Medium term goals

- Provide reference material for science use cases

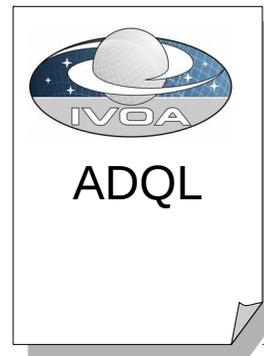

Long term goal

- Future work on validating the BNF grammar

GitHub project
- contributions welcome
