

# Do HiPS yourself!

ASTERICS European Data Provider Forum  
and Training Event  
27 /28 June 2018 - Heidelberg

---

Pierre Fernique

# □ The plan

1. HiPS ? What is it ?
2. State of the art
3. Recent news
4. Do HiPS yourself  
-> in live

## HIPS

Short for *host-based intrusion prevention system*, HIPS is an *IPS* or *intrusion prevention system* that provides security over host-based systems where intrusions and infections are dealt with at the individual workstation level to provide a more secure level of security.

See also *IPS*, *intrusion prevention systems*.

## Hips

In vertebrate anatomy, *hips* is an anatomical region or a joint. [Plus sur Wikipedia](#)

# □ HiPS ? What is it ?

- **H**ierachical **P**rogressive **S**urvey  
*“The more you zoom in on a particular area, the more details show up”*
- Multi-resolution **HEALPix** data structure
- for **Images**, **Catalogues**, 3-dimensional data **cubes**, ...
- **Conserves scientific** data properties alongside visualisation considerations
- No databases or dedicated servers are required, just http

# Aladin Desktop

# Aladin Lite integration

# Stellarium

# Aladin Lite adaptation

# □ HEALPix based (Gorski et al. 2005)

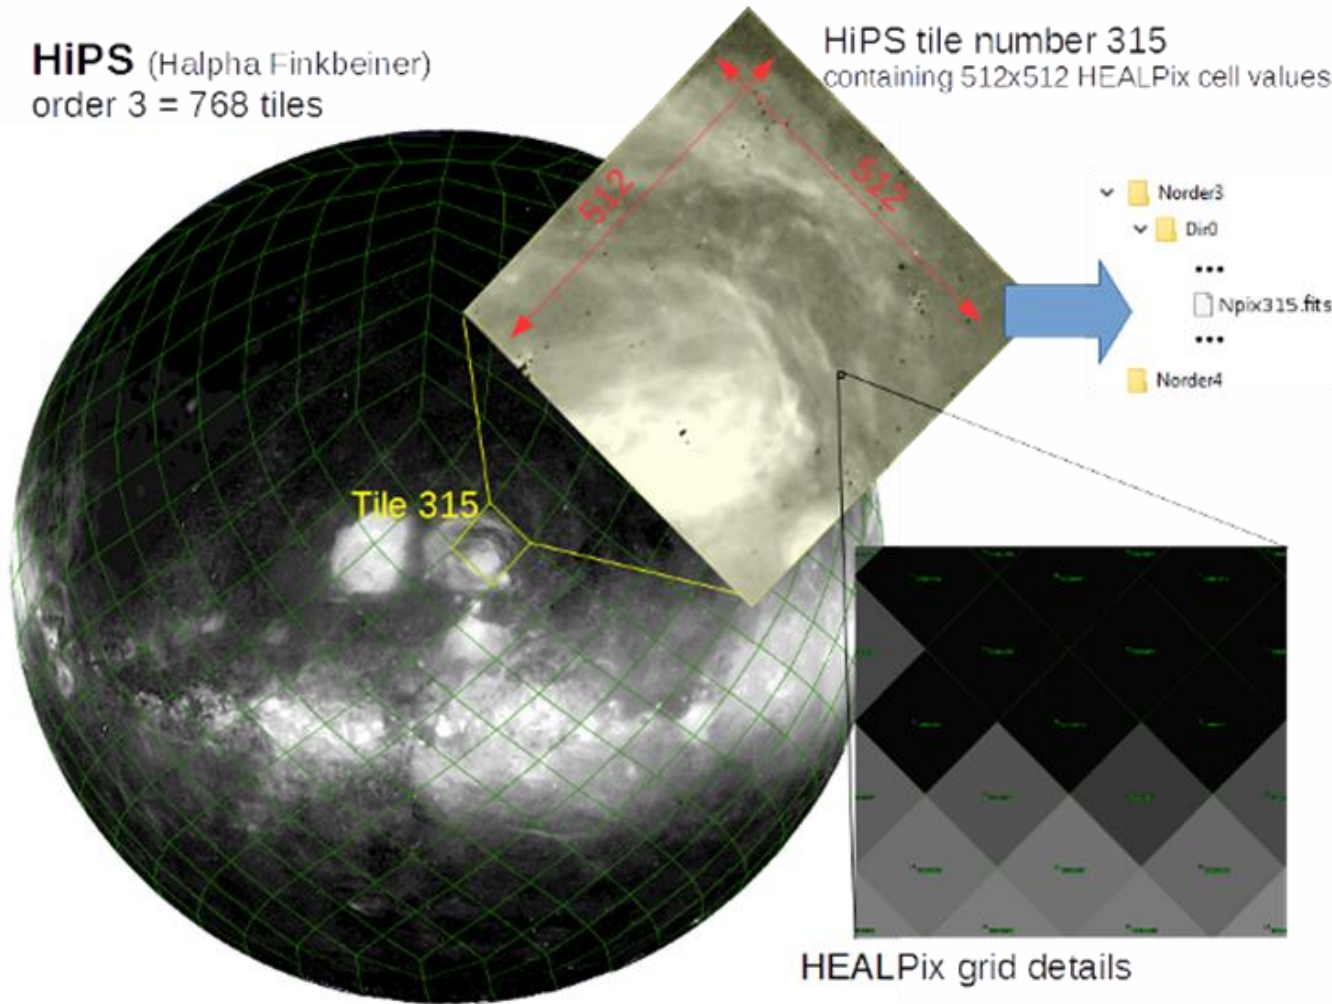

- **12 quadrilateral pixels**
- 2x2 division at each level
- **Equal area**
- Iso-latitude
- Libraries (order 29 = **400  $\mu\text{as}$** )
- HiPS = Mosaic of HEALPix (spherical) tiles stored in a hierarchy of files

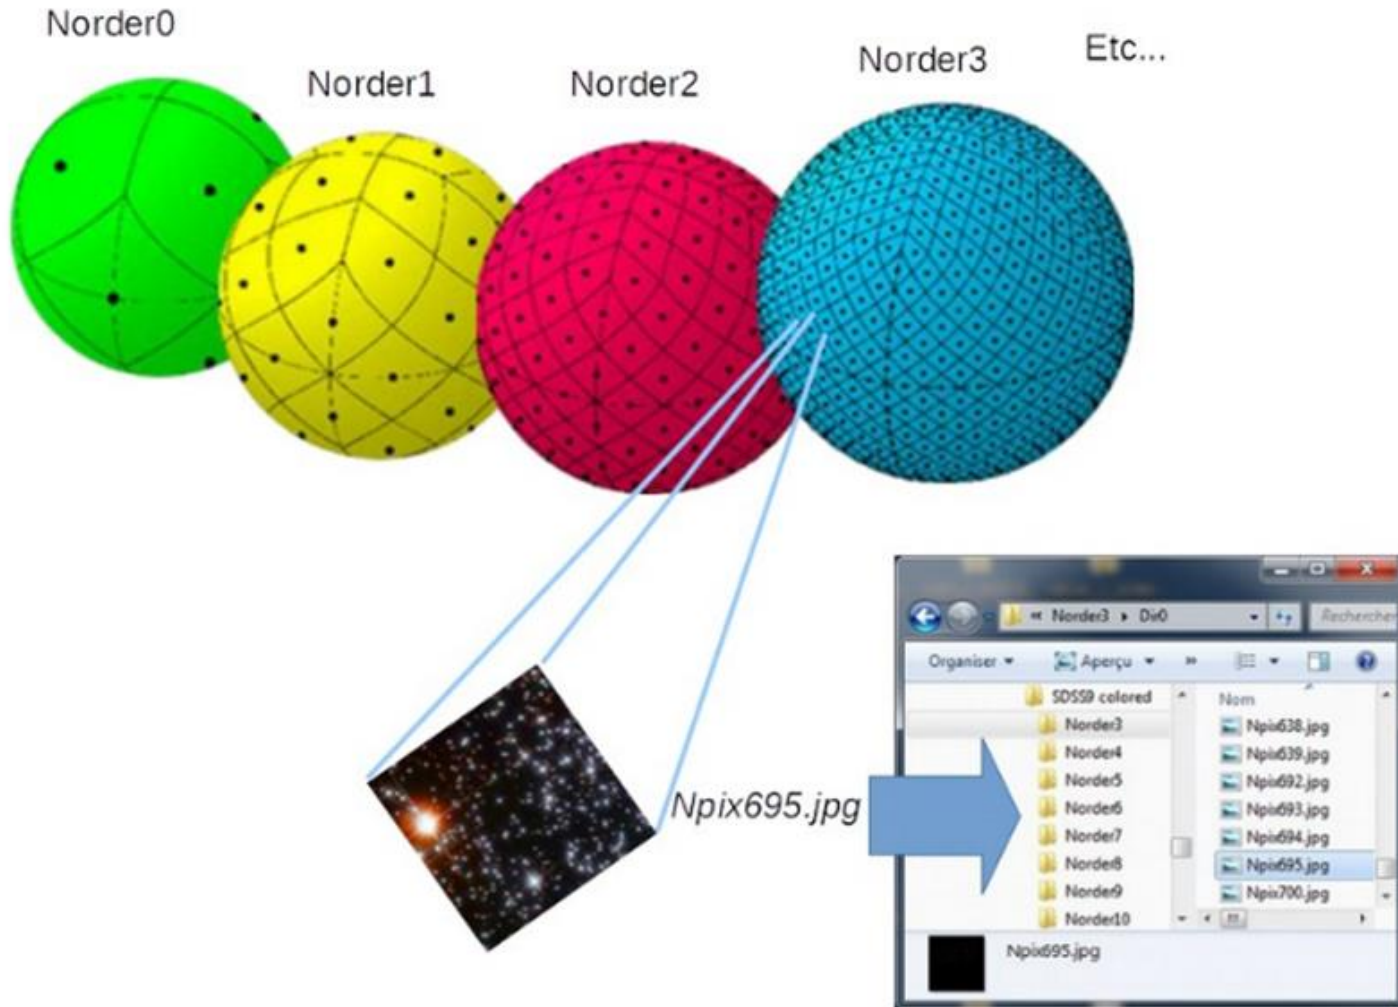

# HiPS = Mosaic of HEALPix tiles (HEALPix pixel geometry)

HiPS (Halpa Finkbeiner)  
order 3 = 768 tiles

HiPS tile number 315  
containing 512x512 HEALPix cell values

# □ HiPS = collection of tiles as files

# □ Going beyond zoom and pan

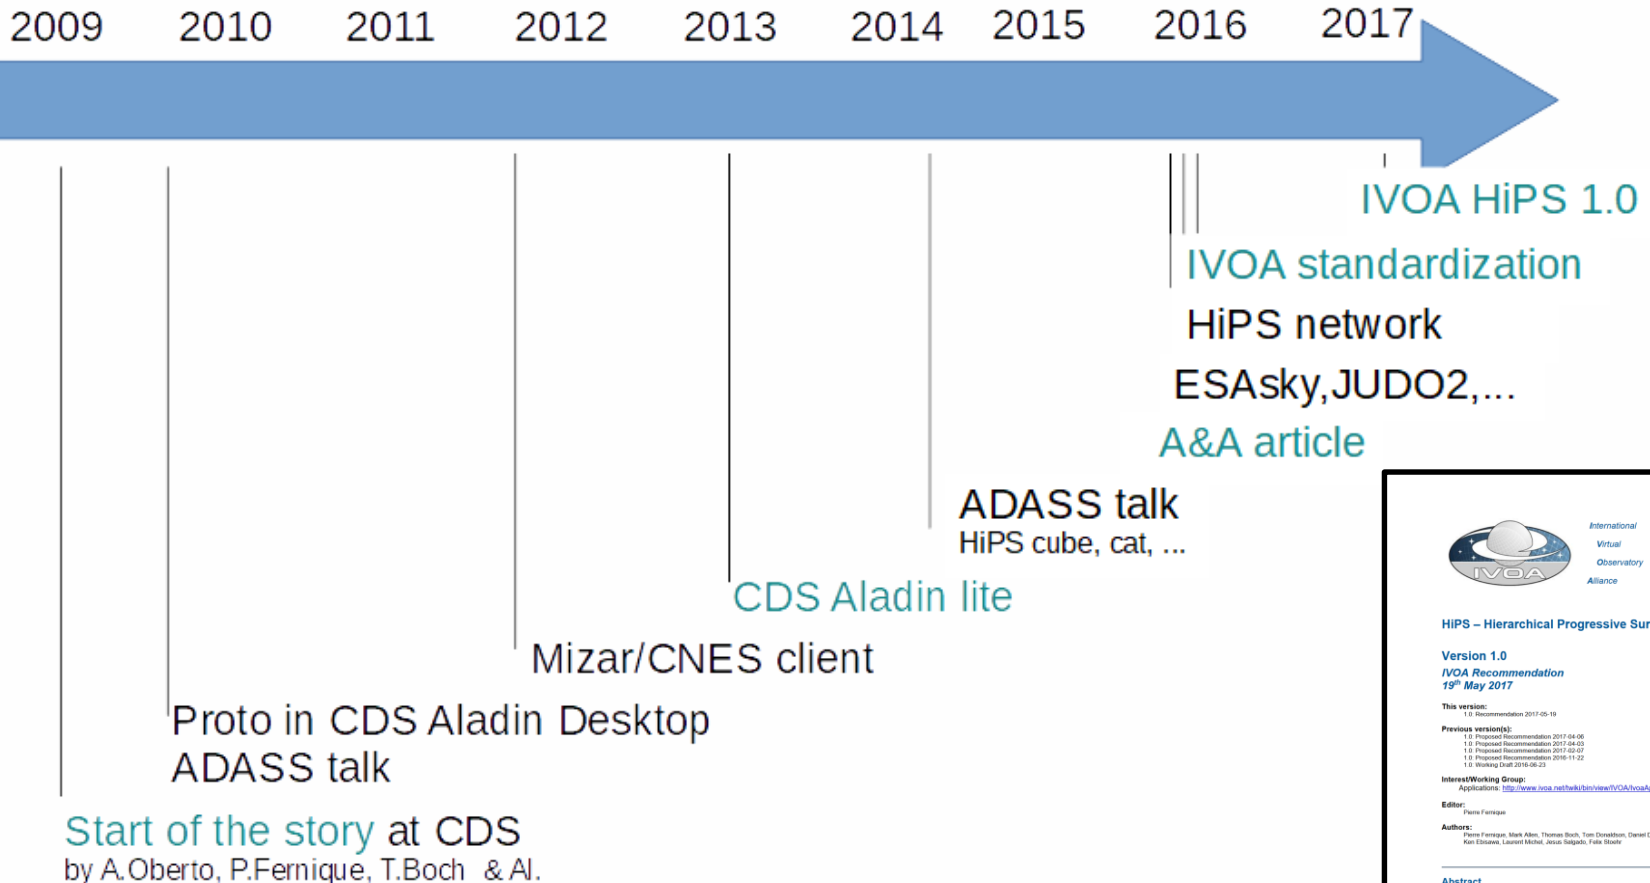

- **Visualisation** and **preservation** of **science data**
  - JPEG/PNG and **FITS** (preserves dynamic range)
  - HEALPix is scientifically robust
  - Link mechanism to original data
- **Ease** of implementation (generation & publication)
  - No databases or servers, just HTTP
  - Leads to fast take-up and innovation

```
java -jar Hipsgen.jar in=Fits_directory
```

# □ IVOA standard since 2017

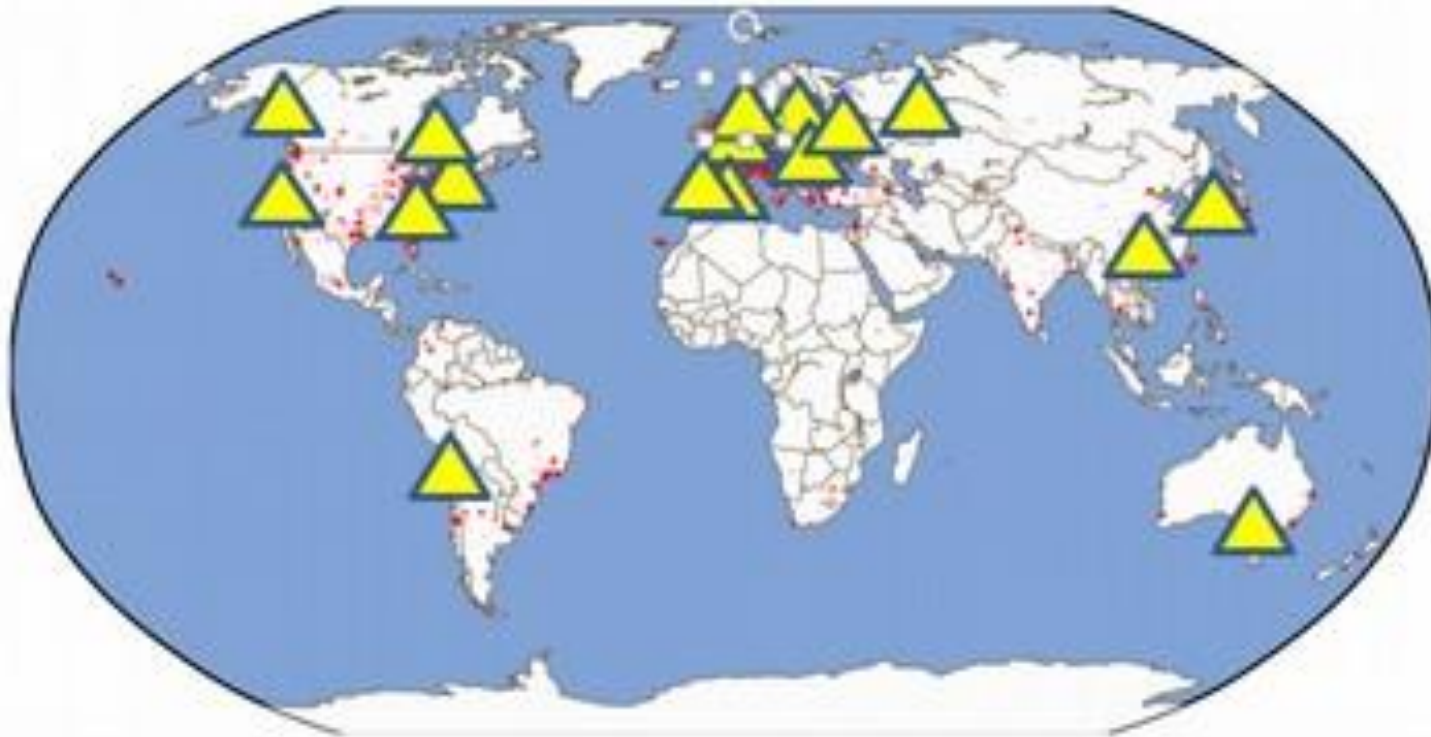

The cover of the IVOA HiPS 1.0 Recommendation document features the IVOA logo (International Virtual Observatory Alliance) at the top. Below the logo, the text reads: "HiPS – Hierarchical Progressive Survey", "Version 1.0", "IVOA Recommendation", "19<sup>th</sup> May 2017". It lists the version as "1.0 Recommendation 2017-05-19" and provides a list of previous versions: "1.0 Proposed Recommendation 2017-04-06", "1.0 Proposed Recommendation 2017-04-20", "1.0 Proposed Recommendation 2017-05-07", "1.0 Proposed Recommendation 2016-11-22", and "1.0 Working Draft 2015-06-23". The "InterestWorking Group" is listed as "Applications" with the URL "http://www.ivoa.net/wiki/View/VOA/ivoaApplications". The "Editor" is "Pierre Ferragut" and the "Authors" are "Pierre Ferragut, Mark Allen, Thomas Boch, Tom Donathson, Daniel Durand, Kim Elnarwi, Laurent Michel, Jesus Sagado, Felix Steier". The "Abstract" section begins with "This document presents HiPS, a hierarchical scheme for the description, storage and access of sky survey data. The system is based on hierarchical tiling of sky regions at finer and finer spatial resolution which facilitates a progressive view of a survey, and supports multi-resolution zooming and".

# States of the art (June 2018)

- **500+** HiPS for **200TB** data
- New HiPS last months:
  - Big reference surveys: **PanSTARRs**, Skymapper, VISTA, SWIFT, DECaLS, DECaPS, DES, BASS, Gaia2,...
  - **Planetary maps** (+50)
- **600 000+** HiPS tiles requested / day (x2 in 1 year)
- HiPS clients : **8** independent implementations **(+4)**,
  - Aladin Desktop (java), Aladin Lite (JS/canvas) + derived tools, MIZAR/CNES (JS/WebGL + **Firefly/IPAC (JS)**, **Stellarium (C)**, **Kstar (C?)**, 140 Aladin Lite implementations
  - In preparation : **OpenWWT/china-VO**, **Globalsphere/NAOJ?** (**WebGL**)

□ HiPS network = the HiPS cloud

# States of the art (June 2018)

- HiPS network: **20** HiPS nodes (+8)
  - Leiden, IRAP, SSC, 3xCDS, AMIGA, svo.cab, IAS, ESAC, JAX + **IPAC, ANU, 2xCADC, HEASARC, China-VO, MPIK, PADC**
  - Not yet official: **ESO, Stellarium AWS/S3, Chili-VO** (in prep)  
=> **“HiPS IVOA cloud”** in an heterogenous context +multiple institutes/funding
- 3 HiPS generators:
  - Images & cubes: **Aladin/Hipsgen** (perf: 10h/1Tpix),
  - Catalogs: **Hipsgen-cat**
  - Skyview code/HEASARC (image) => used for SWIFT
- HiPS validator: Hipslint.jar
- HiPS libs : astropy **Hipsy** (Google summer of code)

# □ HiPS future large surveys

- **LSST**

- HiPS sky viewer for LSST **EPO**  
(cf. ADASS P3-140 poster)
- Adoption of RFC-441 “Request to **adopt HiPS** and **MOC as standard DM data products**”

*“HiPS and MOC are becoming the standard in representing all-sky images and coverages. This RFC requests that DM adopt those two standards and make the corresponding data products to fulfill the above DMS requirement. This does not replace any other data products that DM already committed to generate.”*

- Euclid ?

# □ Do HiPS yourself

1. **Make** my HiPS in 2 minutes
2. **Publish** it in the VO
3. **Browse** it in Aladin

# □ The 4 HiPS principles (in an ideal world)

- **Universality:** Anybody is able to generate HiPS (authors, projects, missions, archives, data centers...)
- **Quality:** HiPS should be generated by the data providers themselves (they know their data). Otherwise, archives or data centers do the job.
- **Efficiency:** HiPS is distributed by several sites and mirrored/synchronized as much as possible (big data is here – think petabytes !)
- **Simplicity:** user point of view: just “click & play” !
